System Requirements

Operating System: macOS or Windows

Memory: 16GB RAM if using Ollama

Storage: 10MB excl. Ollama model (6.6GB)

You need to have the following installed:

- UV package manager
- Optional: Ollama with the qwen3.5:9b model downloaded. (Not required when using OpenRouter.)

Download and setup:

- Download the project folder and unzip
- Cd into the Jai-World-v1.0 folder
- Type this command into the terminal:
`uv sync`

If using OpenRouter:

- Open the my-api-key.env.txt file and replace YOUR-API-KEY with your OpenRouter API Key.
- Use the terminal to change the file name from my-api-key.env.txt to my-api-keys.env. (Trying to rename a .env file manually may not work.)

These are the commands for Mac and Windows:

Mac Terminal: `mv my-api-key.env.txt my-api-key.env`

Windows DOS: `ren my-api-key.env.txt my-api-key.env`

Windows Powershell: `Rename-Item -Path "my-api-key.env.txt" -NewName "my-api-key.env"`

- Type this command into the terminal to launch the app:
`uv run python openrouter-app.py`

If using Ollama:

- Ensure that Ollama is running.
- Type this command into the terminal to launch the app:
`uv run python ollama-app.py`
